1 Introduction

The R-DT-UHF-CW-KBW-101 / R-DT-UHF-CW-RS232-101 is an all-in-one stationary reader that is ideal for light industrial usage.

Its integrated antenna makes it a cost-efficient solution to create redundant reading points in the laundry in order, for example, to handle lost textiles or to speed-up tag registration.

The reader communicates and is powered through its USB port which makes it particularly easy to install and configure. It is available in two versions, one allows to send data to the terminal in keyboard wedge (HID) and the other in serial mode (COM port) and thanks to several configurable parameters, it is possible to customize the output data string i.e., by cutting the EPC length or adding a prefix to the EPC code as well as being able to set filters on the readings, etc to fit your needs.

After the first setup (if needed), the reader is a plug and play reader that can be moved anywhere and connected to any computer to be able to use it to scan your textiles.

This guide is intended to describe how to modify the available parameters to better adapt the operation of the reader to your needs/requirements.

2 Starting up

As already mentioned, the R-DT-USB-CW-KBW-101 / R-DT-UHF-CW-RS232-101 is a plug and play reader that can be moved anywhere and connected to any computer to be able to use it to scan textiles.

To prepare it, follow the below steps:

- 1. Remove the reader from the box;
- 2. Take the USB cable;
- 3. Connect the USB cable to the reader;
- 4. Place the metal plate to secure the cable;

5. Fix the metal plate with the two screws.

6. Place the reader on a non-metallic desk/table and if needed secure it using the mounting brackets included into the box.

3 Adjustable parameters

3.1 R-DT-USB-CW-KBW-101

The adjustable parameters are the following:

Glossary:

Parameter	Specification		Default value			
Mode	Operating Mode		1 (USB HID) or 3 (BT HID)			
Power	Tx Power		26 dB			
Buzzer	Acoustic signal		1 (Enabled)			
PC	Protocol Control – indi	cates how many bits of	0 (Disabled)			
	EPC are sent back to th	e reader				
RSSI	Received Signal Strengt	h Indicator	0 (Disabled)			
Pointer	Starting point for EPC		0			
Length	EPC Length		0			
Filter	EPC filter		1 (Enabled)			
Timeout	Timing for the filter		5000 ms			
Frequency	Transmitting frequency	,	0 (Uses default frequencies defined by standards)			
Area	N/A		N/A			
New_line	New_line New line characters		2 (LF+CR)			
Prefix	String before the EPC		- (Not defined)			
Suffix	String after the EPC		- (Not defined)			
Output_speed	N/A		N/A			
EPC_format	EPC output format for I	BT communication	1 (Uppercase)			

- 1. Mode: allows to select the operating mode.
 - a. 1 = USB HID keyboard wedge
 - b. 3 = BT HID keyboard wedge
- 2. Power: set the transmission power from 5 to 30dB.
- 3. Buzzer: enable or disable the buzzer.
- 4. PC: allows to include the PC into the data string.
- 5. RSSI: allows to include the RSSI value into the data string.
- 6. Pointer: when the EPC length is other than 0, allows to specify where the EPC string starts from.
- 7. Length: allows to specify the EPC length. The minimum granularity is two hexadecimal characters. i.e., if set to 1, the output string will be 2 hex characters.
- 8. Filter: allows to discard multiple readings of the same EPC.
- 9. Timeout: value for the the filter, specified in milliseconds.
- 10. Frequency: if needed, allows to define a single transmission frequency, specified in kHz.
- 11. Area: Not available.
- 12. New_line: allows to append a new line character to the output string
 - a. 0 = None
 - b. 1 = LF
 - c. 1 = LF+CR

- 13. Prefix: allows to specify a prefix for the tag data string.
- 14. Suffix: allows to specify a suffix for the tag data string.
- 15. Output_speed: Not available.
- 16. EPC_format: allows to specify the format of the output string for BT HID connection (lowercase or uppercase).

Examples:

Length	Pointer	Prefix	Suffix	РС	RSSI	Data String
0	0			0	0	300ED89F3350008CCD2CAC01
0	0			1	0	"PCvalue"300ED89F3350008CCD2CAC01
0	0			0	1	300ED89F3350008CCD2CAC01"RSSIvalue"
0	0	Prefix		0	0	"Prefix"300ED89F3350008CCD2CAC01
0	0		Suffix	0	0	300ED89F3350008CCD2CAC01"Suffix"
5	0			0	0	300ED89F33
10	0			0	0	300ED89F3350008CCD2C
0	5			0	0	50008CCD2CAC01
5	5			0	0	50008CCD2C

3.2 R-DT-USB-CW-RS232-101

The adjustable parameters are the following:

Glossary:

Parameter	Specification		Default value			
Mode	Operating Mode		4 (Virtual COM)			
Power	Tx Power		26 dB			
Buzzer	Acoustic signal		1 (Enabled)			
PC	Protocol Control – indi	cates how many bits of	0 (Disabled)			
	EPC are sent back to th	e reader				
RSSI	Received Signal Strengt	h Indicator	0 (Disabled)			
Pointer	Starting point for EPC		0			
Length	EPC Length		0			
Filter	EPC filter		1 (Enabled)			
Timeout	Timing for the filter		5000 ms			
Frequency	Transmitting frequency	,	0 (Uses default frequencies defined by			
			standards)			
Area	N/A		N/A			
New_line	New line characters	LF = Line Feed	2 (LF+CR)			
-	CR = Carriage Return					
Prefix	String before the EPC		- (Not defined)			
Suffix	String after the EPC		- (Not defined)			
Output_speed	N/A		N/A			
EPC_format	N/A		N/A			

- 1. Mode: defines the operating mode -> 4 = serial communication (Virtual COM)
- 2. Power: set the transmission power from 5 to 30dB.
- 3. Buzzer: enable or disable the buzzer.
- 4. PC: allows to include the PC into the data string.
- 5. RSSI: allows to include the RSSI value into the data string.
- 6. Pointer: when the EPC length is other than 0, allows to specify where the EPC string starts from.
- 7. Length: allows to specify the EPC length. The minimum granularity is two hexadecimal characters. i.e., if set to 1, the output string will be 2 hex characters.
- 8. Filter: allows to discard multiple readings of the same EPC.
- 9. Timeout: value for the the filter, specified in milliseconds.
- 10. Frequency: if needed, allows to define a single transmission frequency, specified in kHz.
- 11. Area: Not available.
- 12. New_line: allows to append a new line character to the output string
 - a. 0 = None
 - b. 1 = LF
 - c. 1 = LF+CR
- 13. Prefix: allows to specify a prefix for the tag data string.
- 14. Suffix: allows to specify a suffix for the tag data string.
- 15. Output_speed: Not available.
- 16. EPC_format: Not available

Examples:

Length	Pointer	Prefix	Suffix	РС	RSSI	Data String
0	0 0 0 300ED		300ED89F3350008CCD2CAC01			
0	0			1	0	"PCvalue"300ED89F3350008CCD2CAC01
0	0			0	1	300ED89F3350008CCD2CAC01"RSSIvalue"
0	0	Prefix		0	0	"Prefix"300ED89F3350008CCD2CAC01
0	0		Suffix	0	0	300ED89F3350008CCD2CAC01"Suffix"
5	0			0	0	300ED89F33
10	0			0	0	300ED89F3350008CCD2C
0	5			0	0	50008CCD2CAC01
5	5			0	0	50008CCD2C

4 Ho to configure the parameters

4.1 R-DT-USB-CW-KBW-101

To adjust the desired parameters, follow the below example made with the "buzzer" parameter:

- 1. Unzip the "R-DT-UHF-CW-KBW-101-ConfigTool" folder on your desktop.
- 2. Keep all the documents inside the same folder.
- 3. Launch the "UHFapp.exe".
- 4. In the top left corner select "USB" and click on "open".

🛃 UHF(1.3.4) - [ReadEPC]												-		×

- 11. Unplug the reader from the PC and re-plug it after 5-10 sec.
- 12. The new parameters have been applied and you can now use the reader.

5 Safety and maintenance

Please carefully read this paragraph in order to ensure that a correct care and maintenance plan is followed to guarantee optimal operation of the Portal⁺.

- Storage
 - Do not expose the reader to water or moisture.
- Installation
 - The reader shall be installed on a non-metallic desk/table.
- Handling and operation
 - Handle and operate the reader with care; significant shocks may damage it.
 - Do not place any heavy load on the top of the reader.
- Cleaning
 - Gently wipe with a slightly wet cloth and if needed, dry it immediately.
- Maintenance
 - Do not open the reader and attempt any modification to mechanical and/or electrical parts of the reader. If extraordinary maintenance is required, please contact Datamars support (<u>support-tid@datamars.com</u>). Unauthorized service will void the warranty.
